

Cord Operated Curtain Track Systems

This brochure contains colour illustrations and a summary specification for each of the systems in this product group to assist your clients in making their choice.

The simple combination of high grade plastic with precision engineered aluminium results in the most efficient curtain tracks available. Cord operated curtain tracks prevent the soiling of curtains by frequent handling and enable the user to control heavy, awkward or difficult-to-reach curtains. All of our systems have internal cord channels which prevent the cords from jumping out and thus make them particularly suitable for curves and bends.

Silent Gliss 3000 ▶
Smart, strong and versatile.

System 3000 can be forward or reverse bent. For extra heavy curtains or where one is wider than the other, it can be corded at both ends using an intermediate pulley. This system is regarded by many curtain fitters as the best available for light to medium weight curtains. Can be single, multiple single, pair, multiple pair or asymmetrical stack.

◀ Silent Gliss 3840
Exceptionally attractive ceiling fix track.

With a choice of standard or roller guides this extremely efficient system is designed for ceiling fixing and is ideal for pelmets etc. Its appearance is the same from the back or front and the discreet clamps mean it can be used as a room divider. Can be single, multiple single, pair, multiple pair or asymmetrical stack.

Suitable for use with Wave™ Curtain Heading System

Silent Gliss 3900 ▶
Strong but elegant, the most efficient system on the market.

For medium-heavy curtains the 3900 is unbeatable. A n intermediate pulley can be used for extra heavy curtains. The system can also be operated by hand if a cord tensioner is used. Can be single, pair, multiple pair or asymmetrical stack. The remarkable roller gliders glide on the rim of the channel, so the eye of the glider is thrown forward to avoid friction with the curtain heading and remains in perfect balance.

◀ Silent Gliss 6200
An elegant system used for heavy duty, stage and other use.

For curtains of up to 90kg and up to 25m in length, its appearance is neat and similar from both sides. Can also be used as a double system with infinite overlap using one cord pull only. Single, multiple single, pair or multiple pair stack. Super efficient roller gliders and pulleys.

▲ Silent Gliss 6370
Discreet heavy duty track with twin channel for infinite overlaps.

A cost-effective system for small stages and very heavy contract and domestic use. For curtains up to 70kg and 15m in length. Simple direct fixing through the profile, ceiling fix preferred. Single, multiple single, pair or multiple pair stack. Asymmetrical stacking can be achieved using two tracks.
